## **Chapter 1**

## **Code Sample**

```
// Introduced in DOM Level 2:
interface MouseEvent : UIEvent {
  readonly attribute long
                                       screenX;
  readonly attribute long
                                       screenY;
  readonly attribute long
                                       clientX;
  readonly attribute long
                                       clientY;
  readonly attribute boolean
                                       ctrlKey;
                                       shiftKey;
  readonly attribute boolean
  readonly attribute boolean
                                       altKey;
  readonly attribute boolean
                                       metaKey;
  readonly attribute unsigned short
                                       button;
  readonly attribute EventTarget
                                       relatedTarget;
  void
                     initMouseEvent2(...);
                     initMouseEvent(in DOMString typeArg,
  void
                                     in boolean canBubbleArg,
                                     in boolean cancelableArg,
                                     in views::AbstractView viewArg,
                                     in long detailArg,
                                     in long screenXArg,
                                     in long screenYArg,
                                     in long clientXArg,
                                     in long clientYArg,
                                     in boolean ctrlKeyArg,
                                     in boolean altKeyArg,
                                     in boolean shiftKeyArg,
                                     in boolean metaKeyArg,
                                     in unsigned short buttonArg,
                                     in EventTarget relatedTargetArg);
};
```

## **Bibliography**
